This month's topic:

MAPS ON MACS

How to use Apple's Maps app and Google Maps for 21st century-style navigation on your Mac
to be presented by Tom Davis

Where am I? Where is it? How do we get there? What will it look like when we get there? Are we there yet? To answer these pertinent questions, meet Apple Maps and Google Maps. Having first appeared in OS X 10.9, Mavericks, Apple Maps is built into every new Mac, and Google Maps is available via any web browser. On Tuesday, Tom will show the differences between Apple Maps and Google Maps, and the features of each, including standard and satellite views, suggestions for the best routes, displaying multiple locations of a specific type such as restaurants and hotels, easy access to phone numbers and reviews, sending the info to your iPhone, interactive photo-realistic 3D views, and the ability to soar virtually above select cities and landmarks with "Flyover". When planning your next trip, be it to another state, another country, or to a new doughnut shop across town, may the road rise to meet you and may your path be clear, courtesy of your favorite Maps. No map-folding required.

Also,

BACK TO MAC BASICS

In this segment, we focus on more fundamental skills, to make life a little easier for those who are trying to learn how to use their Macs. This month:

ANOTHER HIKE THROUGH YOSEMITE
to be presented by **Tom Davis**

Last month, Tom showed some new features and differences in Yosemite, with a focus on the Finder. On Tuesday, Tom will take another swing through Yosemite, to show even more features in the new Finder.
