This month's topic:

PHOTOS FOR MAC

How to transition from iPhoto to Apple's newer Photos app to organize your photos and make them look spectacular to be presented by Roger Owens

Picture this: a free Macintosh app with which you can sort your digital photos, organize them by when and where they were taken, edit and improve your photos in various ways, automatically send those improvements to your other Apple devices, order printed goodies and gifts, and share your photos in numerous ways. In OS X El Capitan or Yosemite, that daydream is a reality, easily confirmed via a quick look in your Applications folder. Photos is Apple's replacement for their iPhoto app, and its features list is impressive. On Tuesday, Roger will show Photos' many highlights and how to use them, from sorting and organizing your photos to rotating, cropping and straightening, tweaking attributes such as color, brightness and exposure, accessing extensions, designing your own stunning, printed photo books, creating beautiful slideshows, and using iCloud Photo Library to synchronize it all with all your other Apple devices or even your PC. Please join us on Tuesday, as both you and your visual memories will be delighted to learn that you do not need to be a pro to manage your photos well. Get the picture?

Also,

BACK TO MAC BASICS

In this segment, we focus on more fundamental skills, to make life a little easier for those who are trying to learn how to use their Macs. This month:

WHERE (ON MY MAC) AM I?
to be presented by **Rob Ellis**

Staring at an open folder and wondering how you got there, and where exactly on your Mac that folder is? On the Mac, it is easy to end up with folders inside of folders inside of other folders inside of still other folders. On Tuesday, Rob will show several very simple ways to figure out where you currently are, and to go backward and upward through the various folders.
